

Objectives:

This is an assessment of your basic understanding of Perl.

For this project you must show mastery of:

- Proper code layout
- Variable declaration
- Constant declaration and initialization
- Modularization
- Dispatching
- Program sequence and selection
- Cohesion
- Input validation & sanitization
- Good programming practices

Project background: You are a junior administrator for a small regional hospital system. You have been hired to administer the Linux virtual servers and provide services for the various hospital departments.

Quiz 2 –Perl Basics

Providing evidence of mastery of skills

You have been asked to write code that does the following:

- Ask a user to input department number (1-10), employee ID number (1-5000), and years of service (1-40). After data is entered, display total years of service for all employees in that department.
